

The capability you want. The confidence you need.

Nowchem Pharma & Skincare specialises in the provision of world-class contract manufacturing services including TGA approved products, coupled with market-leading flexibility and turnaround times.

Based in the Shoalhaven for 45+ years, we have worked with many of Australia's leading pharmaceutical brands and continue to invest heavily in our inhouse capability. Each year, our state-of-the-art production and technical facilities allow our clients to inject new levels of agility and value into their existing supply chains. The result is outstanding manufacturing efficiencies for volumes up to 10,000 litres and one-off runs.

Everything we do is supported by long-established supplier and distribution networks to ensure we get our clients' products to market, wherever they need to be.

Nowchem Pharma offers liquid blending, cream mixing, sachet, tube and bottle filling with ink jet coders and heat shrink wrapping to support the packing and filling system.

Diverse and flexible, Nowchem Pharma works very closely to not only ensure quality of our clients products but also offer Research and Development opportunities to assist our clients entering new markets or to improve the performance of their current products.

Nowchem is a proud member of ACCORD and The Australian Society of Cosmetic Chemists to keep us up to date with regulations and new industry trends to assist our clients.

Liquid Blending Facility

The liquid blending facility includes three 3,000L, two 10,000L and one 6,000L tanks with connection to the purified water main for manufacturing of general products.

Several 100L to 600L tanks are also available for premix and pilot batch manufacturing.

Cream Mixing Facility

The cream mixing facility includes two 1,200L tanks and a 120L heated feed tank allowing for the manufacture of topical creams including sunscreens and medicinal products.

The main mixing facility is supported by 150kg and 250kg mixing tanks used for trials and short run requirements.

All filling is conducted in a dedicated clean room offering a 4 head filler for bottles from 100ml up to 1L, a single head bottom up filler for bottles from 1L up to 5L, a tube filling machine for tubes from 30ml up to 300ml and a sachet machine.
